FUN WITH LOGIC!!!

Fridays, 1:00 p.m. - 2:30 p.m. (2 Classes 8/9 thru 8/16) in Room 30	**Tuition $20**

The topic of logic can seem hopelessly abstract and impractical. We don't do it that way. We study logic as it applies to practical issues including finance, law, politics, psychology, and science; so, this class is easy, practical, and fun. What's more, we start our study with the brilliant questions and answers of the ancients (Socrates, Confucius, Aristotle, and the Buddha) and then compare them with the views of modern thinkers.

There are no prerequisites, and you don't have to be a math whiz to learn. There's no better time than summer for this Miracle-Gro for your brain, so come and enjoy!

Robert Silverman performed a combined total of thirty years of tech support and product development at IBM where he developed patents and products in computer systems security and management, and at JP Morgan Chase where he developed patents for the trading of financial instruments and cryptocurrencies. He has also taught logic and philosophy at Rutgers University and (currently) Hillsborough Community College totaling nineteen years.
